Long, thin and almost transparent with a black dot at either end of their body (air sacs used to control movement).

> Phantom Midge Larva *Chaoborus sp.*

> > Blood red worm usually found in the mud. When they get near to hatching into a midge they lose their bright colour.

Bloodworm Midge Larva *Chironomus sp.*

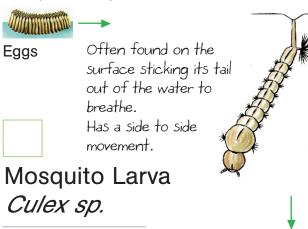

Those small orange dots that look like they are jumping around are water fleas!

Water Flea *Daphnia sp.*

Mosquito life cycle

Shaped like a comma, often found just below the surface of the water using the breathing trumpets on its head.

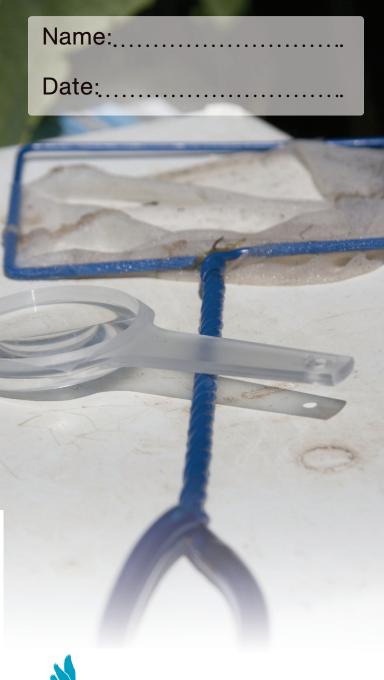

Adult

Mosquito Pupa *Culex sp.*

Quite small and light green in colour. Watch how they move, it is a little bit like a caterpillar.

Leech *Glossiphonia complanata*

Checklist of Pond Creatures

Slimbridge

Wetland Centre

Fast bugs, that have a jerky movement. Their front legs look like 2 oars rowing through the water.

Water Boatman Corixa sp.

skin!

Oval in shape with a smooth movement through the water. They may have a silver lining which is actually air bubbles trapped in hairs used for breathing.

Great Diving Beetle Dytiscus marginalis The Woodlouse of the water! Generally crawls along the bottom and is easy to identify with its 14 legs.

Water Slater

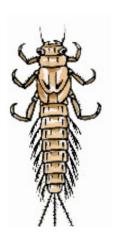

Asellus sp.

Long thin body with 6 legs and 3 tails. Look closely and you will see the gills down the side of the body moving.

Mayfly Nymph Baetis sp.

Light green to orange in colour. Swims on its side but when it stops it curls its tail under to give the classic shrimp shape.

Freshwater Shrimp Gammarus pulex

Long and thin with 6 legs and 3 tail like gills. sideways swaying movement.

Damselfly Nymph Sialidae sp.

Long and thin with 6 legs and 2 tails. Like the adults they are ferocious carnivores and can bite through human

Great Diving Beetle Larva Dytiscus marginalis

Very flat and dark in colour. Looks like a line of mud moving! Flatworm Dugesia sp.

Flat spiral shell that is often mistaken for a stone. Can be very small in size. **Ramshorn Snail**

Planorbis sp.
